

FollowUs™ delivers the most accurate in-service cell location ever to the UK

Pinpoint location of your Employees

Best-in-Class Solution
Accurate Location Information

Follow Us™ had a vision to provide companies with the most accurate in-service cell location ever, to enable them to pinpoint their employees without the need to deploy expensive hardware or software infrastructure. Follow Us™ turned this vision into reality with a best-in-class solution.

Follow Us Accuracy

It used to be that Cell Location technologies were not able to offer a credible means of providing a location solution. Accordingly, a company's only option was to implement a GPS system and have to pay for the high capital and installation costs that are associated with this technology. GPS Service Providers also historically tied their customers into long contracts for periods of 3 years or more, giving little scope for the dissatisfied customer. Today, with the FollowUs™ technology, the accurate location of your company mobile phones can be displayed to approved members of your staff who need it – wherever and whenever they want.

Kevin Brown, Operations Director at FollowUs™ explains, “It was important to us make the FollowUs™ service as accurate as possible when locating a customer mobile phone and we are delighted with the results. The ability to locate a mobile phone will always depend on the coverage of that network operator, and although accuracy is reduced in rural areas, we have found in city environments that accuracy can be within 100m.”

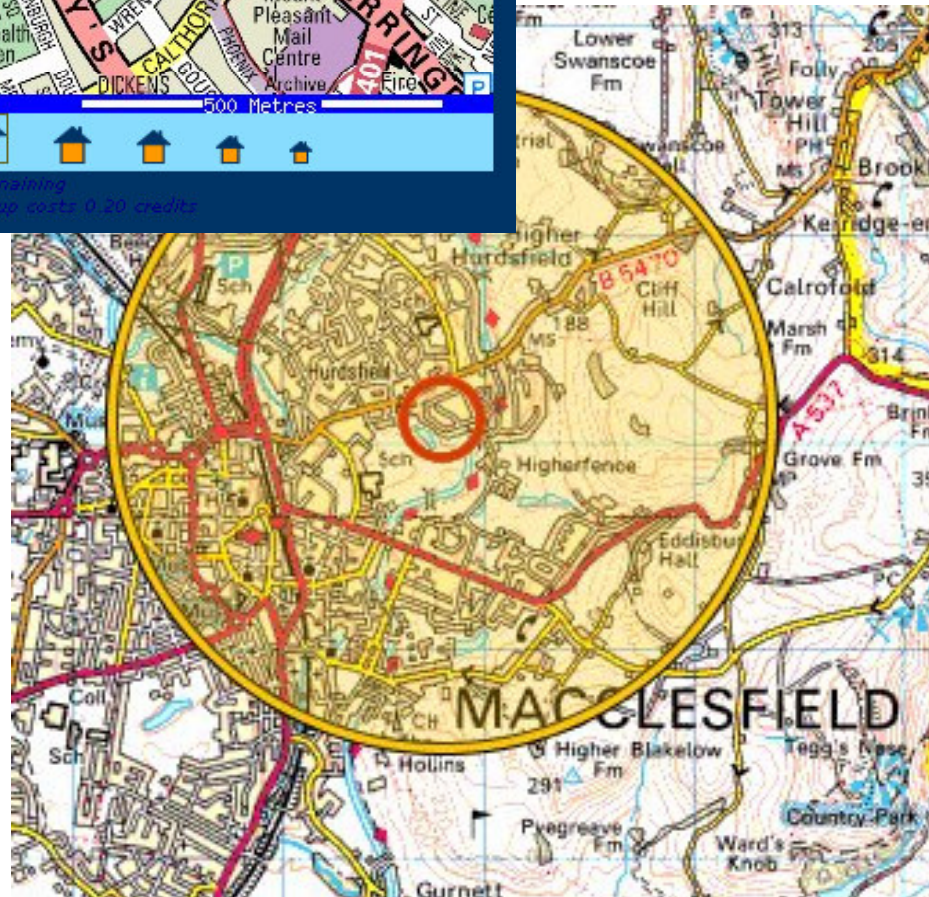

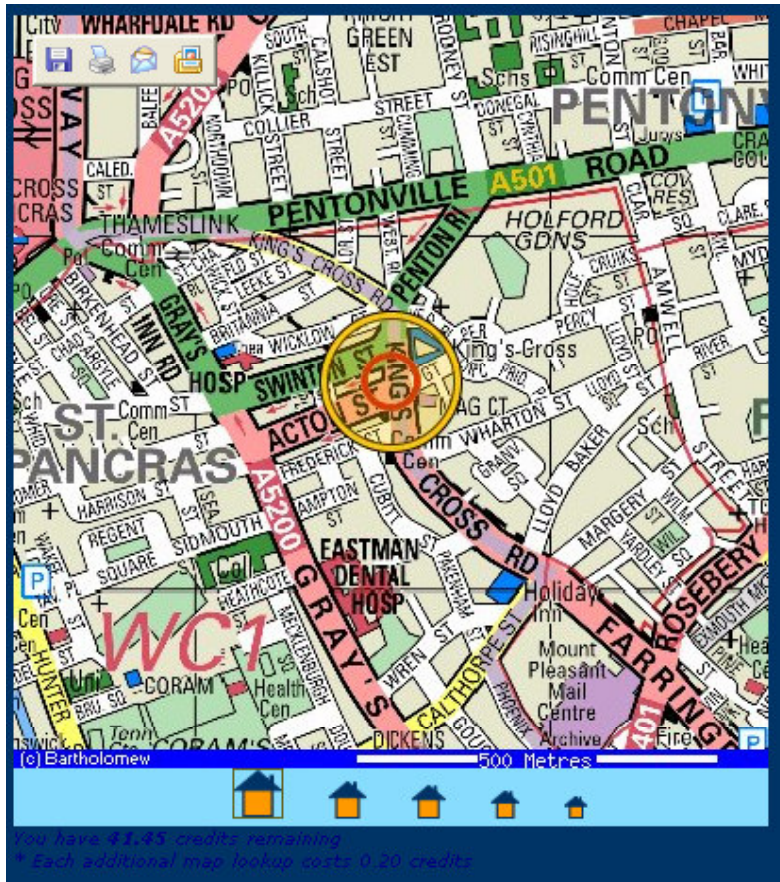

Pinpoint central locations in cities such as London and Birmingham up to 100m

The FollowUs™ system has proved itself in the field to deliver live accurate information.

FollowUs™ now offers a real alternative for companies who do not need to know where their mobile workers are from one second to the next, nor need to position them down to the nearest meter. Why pay through the nose when you can FollowUs™.

These screen captures show real location data. You will see that accuracy will vary depending upon the cell coverage in that area. The device should be located towards the outer rim of the circle.

Please note that the mobile will be found near to the outer part of the orange circle and is not located in the center point, seen as a red circle.

The FollowUs means of locating the mobile workforce has now come of age. Forget long term contracts of 3 years or more, forget high cost hardware, forget installation fees and the inconvenience of having to make your staff or their vehicles available for installation works (if you chose our mobile phone solution), in fact forget everything you have heard about location solutions up until now...

FollowUs – working to deliver you best-in-class location solutions.

About Follow Us™

With its energetic approach and its officer's extensive experience in the telecommunications and wireless sectors, FollowUs™ is positioned to continue to deliver best of breed location solutions. It is committed to achievement of excellence and adheres to stringent guidelines to ensure that this is the case.
